Abstract:

this project's main purpose is to make it easier for the school administration.
The service is achieved by implementing a system that provide a student management system and a database for entering and retrieving information from a computerized database.

Introduction:

The rational of this document is to create a school management system will help the students and the school administration to organize all the information about every student in one place instead of using paper records.

The system include a login form and after that the page consist of the information of the students and database contains all the data.
The information can't be altered or modified by the users except for the administrator (the only one who have full access to the system).

Purpose:

The whole idea is to provide a system will save the information of the new students and edit the information of old students and maybe delete all the data after the student graduated. And to make the student during the study follow the status of the courses.

Also the system can print the whole database or specific info after filter with retrieve the data of a student by the search button (ID).

Objectives:

we want to make all the schools have a good systems for the administration to help the employees and the students to be more comfortable, and make the next generation deal electronically. and all this will happen when we spread the culture of development for guaranteed success.

The objective of developing such a computerization system is to reduce the paper work and safe of time in school management. There by increasing the efficiency and decreasing the work load.

the system shall provide faster procedures when a new student came to this school to register, old student want to edit something in his information, also if the student want to left the school, the student will be able to track the status of the courses in the school..etc.

There will be future work if the system proof it is effectiveness.

Start and End dates:

start: 16/4/2021

End: 15/6/2021

- The project will be completed within two months. First month in designing and the second one for implementation.

Conclusion:

The school management system designed to makes the schools in the third world countries depends more in electronically systems instead of paper records. By computerized to reduce human errors and increase the efficiency.

The system was created to store the information of students and their courses status, also to make the process for the administration school easier.

Thank you For considering approving this project.
